

Training ring with a solid floor. The SUPREME boxing ring for training is designed for demanding training and loads. You just need to assemble the steel frame of the boxing ring, and then assemble the OSB floor onto the inner space of the frame. Thanks to its functional design, you never have to screw anything anywhere.

- Elevated padded floor
- Cotton canvas
- Leatherette corners and ropes

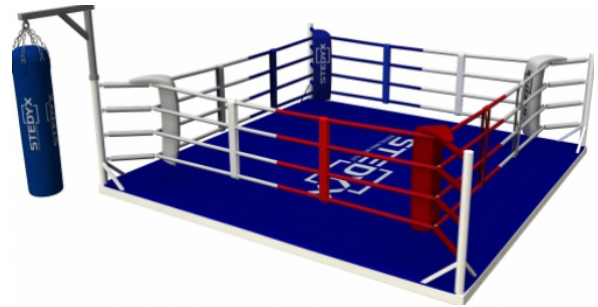

Purposeful design:

The SUPREME training ring is design based on the lower version FLR 5040. The elevated OSB floor ensures comfortable training. The floor of the ring is covered with a cotton canvas, and it meets the most stringent requirements of boxing federations. The floor of the ring is not firmly attached to the side structure. It can, therefore, be set on any surface. You have the option to buy a console for a boxing bag!

Safety:

It's simple! Thanks to its medium-heavy duty structure, the boxing ring is stable and even suitable for more demanding training. The elevated OSB flooring has a padded layer and a cotton canvas. We normally supply this ring with 4 ropes. The safety of the athletes is our first priority.

Because we are the manufacturer, we can offer you this boxing ring in more color variants. You can choose color combinations of the ropes.
