

This PVC upper canvas for the boxing ring will liven up your gym! It's over print and we can print any logo or design you want. NOTE: Velcro for side canvas fastening is extra charged.

- Smooth surface ► Long lasting print ► High strength

The upper canvas for the boxing ring is specially designed to stand up and ground fighting. Its big advantage is that athletes fighting on the ground do not burn. Note: In contact with water slides.

Stedyx makes all sizes and shapes of this canvas and we always produce it upon your request. Available with **velcro and eyelets** on the edges.

The PVC canvas for the boxing rings is made of Polyvinylchloride. The weight of this **material is 510g / m²**. The material for fabrication of canvas is always white. We print the color of PVC boxing ring canvas or logo on whole surface. So the **color of PVC boxing ring canvas is not part of the material**.

We use the highest quality printing technologies when the color on the sail is drying out with UV light. This technology ensures very good abrasion resistance and long service life. Even though these technologies guarantee high quality, the color on the sail is always printed in full. And if you treat roughly (for example, when scratching a sharp object), the paint may be discolored. The sail is always white on the other side and is **welded in 1 50 m wide strins**
